

## Bitcoin MeMe (BTCMeMe) - Project Litepaper

### Introduction

Bitcoin MeMe (BTCMeMe) is an ultra-rare meme cryptocurrency designed with a radically low supply of only 5,000 tokens. Created to test the boundaries of digital scarcity, BTCMeMe fuses meme culture with solid fundamentals to attract collectors, traders, and meme enthusiasts across the world.

### Tokenomics

Total Supply: 5,000 BTCMeMe

No buy or sell tax.

No minting beyond the fixed supply.

Liquidity has been added and locked to protect investors and ensure a fair and transparent launch.

### Security & Ownership

Ownership of the BTCMeMe smart contract has been permanently renounced. This ensures no one can change or manipulate the contract functions in the future. While a mint function exists in the source code, it is rendered permanently unusable due to the revoked owner privileges.

### Liquidity Lock

Liquidity has been securely locked via DxApp to protect holders and eliminate the risk of rug pulls. This lock reinforces the project's long-term vision and ensures safe trading conditions for the community.

### Founder

BTCMeMe was created by Azlan Nakamoto — a crypto visionary committed to building revolutionary and trustworthy digital assets. BTCMeMe is a part of the broader mission to create iconic, ethical, and viral cryptocurrencies born in Southeast Asia.

### Community & Vision

With a focus on rarity, transparency, and hype-driven growth, BTCMeMe aims to be a collector's gem and a meme coin legend. The project welcomes all degens, collectors, and dreamers to join the movement and help take Bitcoin MeMe to the moon.
